Determinants of fruit and vegetable consumption among children and adolescents: A review of the literature. Following a phenomenological study of nine individuals involved in sexual masochistic sessions who regarded pain as central to their experience, [82] sexual masochism was described as an addiction-like tendency, with several features resembling that of drug addiction: craving, intoxication, tolerance and withdrawal. The questions for this dialogue concern the nature of the divergent answers and whether they represent a church-dividing difference, i.
